Dr. Franklin D. Gilliam, Jr.
Chancellor UNCG

Dear Dr Gilliam

The success of a program cannot be measured by the number of students or alumni. Instead, it must be measure by the footprint that the teachers and the university have left in them by creating excellent professionals committed to this area of knowledge, as are the professors of the program. They have proven to be committed to the academic growth of each student. The dedication of teachers inspires the students to do everything possible to improve. I thank the doctoral program for allowing me to visit there, where I found the best professional advice that I could find.

In my opinion, due the big social and academic impact that these programs (Ph.D. in Computational Mathematics and Ms. In Mathematics) generate, they should not be discontinued.

Sincerely,
Diana Sánchez
Universidad Nacional de Colombia, Manizales.
